

From Sparse Boundary Poses to a Multi-View Scan Plan

The KCD2 Scene 1 plan uses a convex-hull model, five vertical layers, and 22 orientations per retained spatial point.

(a) Boundary acquisition

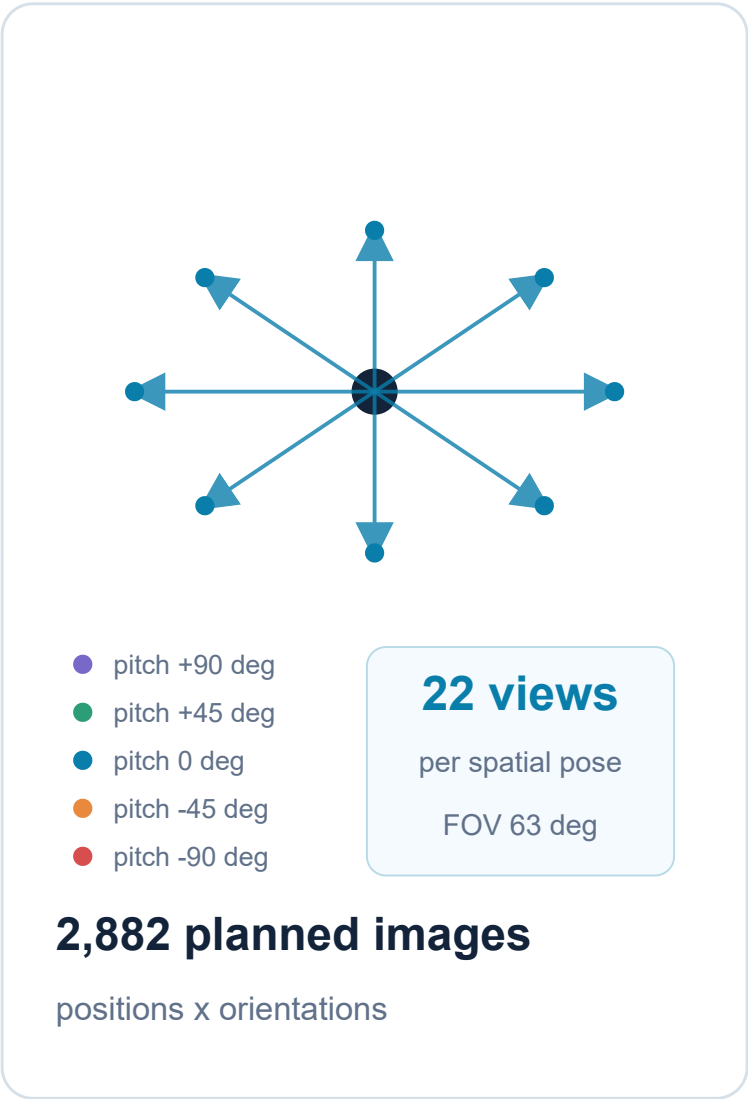

(b) Convex-hull space

(c) Five-layer packing

(d) Multi-view output

27 unique boundary XYZ -> 19 hull vertices -> 131 safe positions -> 2,882 explicit camera samples

All counts and layer heights are read directly from scene_1_5layer_hull_plan.json.
